

Christopher Nicholson-Sauls

I first taught myself the essentials of markup and stylesheets, when HTML 3.2 was the latest, and CSS was an experiment. The web has changed considerably since then, but my love of the technology behind it remains constant. Having worked primarily as a freelancer, I've had to be self-motivating and self-managing, capable of working equally as well alone or with a team, and broad in my skills and vision.

Objectives

I hold to the belief that the web, as a platform, is only just realizing its true potential for more creative, meaningful, and expedient ways of accessing and consuming information and services. Being a part of that, requires first being part of a team providing something useful to real people. I'm hoping to find stability and

focus through proper employment, in order to produce work I can be truly proud of.

Skills & Tools

Core Technologies

HTML 5, CSS 3, JavaScript

Frameworks & Libraries

Bootstrap, Detectizr, Foundation, jQuery, metaquery, Modernizr, etc

Techniques

AJAX, live generation, responsive, single-page-app, transitions, etc

Toolchain

RequireJS, SASS, etc

Back-End

Apache, nginx, PHP, Ruby, Ruby on Rails, Sinatra, Symfony, Vibe.d, etc

Experience

Over the last two years I've worked as an independent contractor. In that time I contributed markup and style work on nationalguard.com and other projects, implemented the page at veterans.hillsdale.edu, and was responsible for both front- and back-end on pdteam.com. Going back more than a decade, I've provided consultancy and piecemeal work for a variety of clients, including one of your newest employees, Dustin Pate.
